

## Allied News

Second Quarter 2015

### Personnel Safety Topic

Basic environmentally safe-fueling tips to follow when re-fueling your vehicle:

- Before fueling turn off engine
- Keep hand in contact with the pump nozzle throughout the refueling process
- Do not use a rock, wood, etc. to wedge the pump handle so that the tank will fill automatically
- Immediately wipe up / clean up any spills
- Never smoke or strike a match while fueling

### Nuclear Safety Topic

Problem Identification and Resolution  
Environment for Raising Concerns  
Work Process

### In the News

Allied Specialty Resources, LLC, was formed in 2014 to address the need in the power industry for contingent Craft resources and providing a payroll option which offers a low cost means for the customer to bring in known resources. Allied Specialty Resources was recently certified by the Women's Business Enterprise National Council (WBENC) as a Women's Business Enterprise and a Women Owned Small Business.

Allied Technical Resources, Inc, signed an agreement with GenMover in May, 2015, to serve as their Sales Representative in North America and Canada. GenMover uses a patented design to lift and horizontally move generators with a turn of a 1/2" ratchet drive. This approach reduces the alignment evolution from one to two twelve hour shifts down to approximately two hours. Details can be found on their webpage: [www.GenMover.com](http://www.GenMover.com).

We also have an agreement with Radiation Protection Systems to serve as a Sales Representative in North America and Canada. They provide HEPA ventilation systems, shielding and temporary containment structures to the industry.
